

## Bag Filter

---

For Removing Sediment or Undissolved Crystals When Dissolving Salt for Foliar Spraying

The bag can be hung from its strap directly above the opening in a spray tank and filled with 25 lbs SEA-90. Water is then added into the bag dissolving SEA-90 and catching any sediment and undissolved crystals. Two bags can be used in this process so one is always being filtered and no time is lost.

Example: Pasture Application

200 gallon spray tank sprays out 20 gallons per acre. 5 lbs per acre Redmonds Salt.

Fill 2 filter bags with 25 lbs each and run water through until 50 lbs are dissolved.

Fill tank to desired 200 gallon level and

spray.

Contact Utah Biodiesel Supply ([www.utahbiodieselsupply.com](http://www.utahbiodieselsupply.com) or 801-820-5753) and purchase their 7" x 16" 200 mesh bag filter. (When purchasing 10 they sell for \$3.50 each including shipping).
